土器を共有する地域の広がり

The expansion of the community sharing ceramic pottery

In the southern part of the Tohoku region, a kind of pottery called 'Daigi type' is widely distributed. It is thought that regions featuring common patterns on pottery were regions where people had strong ties, sharing dwelling structures and ritual customs.

The daigi (pottery) area and the distribution of composite hearths

While composite hearths are distributed mainly in the area where daigi (pottery) is found, different types of hearths are found in the surrounding area.
